

INTRODUCTION - SECTION 5
WHAT IS THE GOAL OF THE
HUMANIST FAMILY BRAIN SURVEY?
December 10, 2018

The main goal of the **Humanist Family Brain Survey** is to focus your attention on the meanings of the 15 major brain ideas, which describe the most important 15 brain functions that you can control. Then, you can provide *feedback* concerning the educational value of this website to other humanists.

This website can help you learn the parts of your brain that play major roles in controlling your thoughts and feelings and actions. In addition to learning the meaning of the progressive logical sequence of the 15 interactive brain ideas, you will be able to improve your ability to reason, make better decisions, and express your feelings more empathically.

To make brain training even easier, many of the files can be printed in order to take advantage of the multisensory approach to brain instruction. You will have your own copy of the essays to edit so you can continue studying without the need to use your computer or online devices. Also the links are arranged for random discovery according to your moods and motivations.

All the time you are studying your brain for new insights, the **30 Day Timetable Chart** will be there to remind you how important the *spaced-repetition method* of memorization is for learning the 15 brain ideas and the dynamic relationships among your *brain's structures* and your *mind's functions*.

A **PowerPoint Presentation** will provide an automated view of the 15 memory codes and a preview of the 15 definitions in the unique sequence of 15 brain ideas starting with **Brain Idea #1 = WORKING MEMORY** and ending with **Brain Idea #15 = LONG-TERM MEMORY**.

The major goal of the **Humanist Family Brain Survey** is to determine whether or not there is a consensus among **American Humanist Association** members concerning the relevance of the 15 major brain ideas for improving humanistic relationships and behaviors in families and organizations.

HUMANIST FAMILY BRAIN SURVEY

Please consider participating in the **Humanist Family Brain Survey** by sharing your ideas about the best ways to improve this website for family use. To achieve this goal, please think about answers to the following four questions:

[1] Are the 15 brain ideas relevant to your life, whether you are an adult, teenager, or child?

[2] Can more focus on the controllable factors of the brains of family members help parents educate their children and teenagers so they will be more likely to become committed lifelong humanists?

[3] What other brain ideas would you like to add to the 15 brain ideas (or like to replace with other brain ideas) featured on this website?

[4] What other book sources would you like to add to (or like to substitute for) the recommended books cited on this website?

An affordable practical handbook will be available on Amazon and this website soon with more detailed references and memory exercises concerning the **Alphabetical Brain™ Vocabulary** philosophy. Also, a printed deck including all of the 15 brain flash cards will be available for purchase.

This website is designed to motivate all family members to communicate about their brains and minds at all ages in progressively more complex ways, since it involves redefining reality in a secular scientific way.

WHY THIS MATTERS: The goal of the **Humanist Family Brain Survey** is to obtain constructive feedback from humanist survey participants about the effectiveness of this website to provide humanist families with a realistic educational context for learning about the brain's spectacular structures and the mind's fantastic functions.
